DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 38, 39 and 41-43 are rejected under 35 U.S.C. 102(b) as being anticipated by Young et al (US 5,749,547).

Young et al discloses an apparatus for controlling a model train comprised of a transformer 20 operatively connected to the track and applies a voltage to the track. The transformer power can be adjusted manually. A controller 12 is also operatively connected to the track in that it communicates control commands by means of radio frequency through a base unit 14 and the transformer 20 and through the track itself, as shown in figure 1. The controller relays operating instructions for the model train 24 through a series of push buttons on the controller 12. These instructions include controlling the speed of the train as well as various sounds associated with a train. Various operating features are shown on the remote control in figure 2.

Allowable Subject Matter

Claims 1-37 and 44-52 and 54 are allowed.

Claim 40 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
